

Service Charter

What can you expect from Us?

Introduction

Whether you're new to iMS, or a long-standing customer, this charter outlines our promise and commitment to offer both value and efficient customer service to you through helpful, timely and knowledgeable support.

We constantly evaluate ourselves against this charter and strive for continuous improvement. We will publish our performance on an annual basis and welcome feedback and comments from you.

Terminology Guide

Our staff are trained locally in our products and in support services. Our support processes follow UK Government approved [MLv3](#) framework and the appropriate naming conventions in line with those guidelines. In doing so, the language used is very important:

Incident = an unplanned degradation or interruption to a service.

Problem = the cause of one or more Incidents, also referred to as 'defects' or 'bugs'.

Service Request* = Requests for Training, Consultancy, Report Writing, Technical Services and Standard Changes.

Enquiry** = Requests for information and "How do I..?" queries.

Change Request = Request for functionality to be enhanced in the product.

Workaround = a temporary solution aimed at reducing the impact of an Incident or Problem.

Incidents, Enquiries and Service Requests may at times all be referred to as a 'case' or 'ticket'.

*Remote Support Services are available on a specific SLA from Professional Services Teams.

**Use of the One Service Desk is not a substitute for training. Enquiries may be referred to Professional Services for assistance.

How do you develop software? / Software Development Strategy

There will always be a requirement to continually improve and enhance our products. Part of this can also mean products will reach end-of-life and be decommissioned. These outcomes are recognised as having different drivers, all which are taken into consideration:

Business-led:

- Legislative changes (including safety and security)
- Strategic business decisions
- Technological advances

Customer-led:

- Requests from individual customers

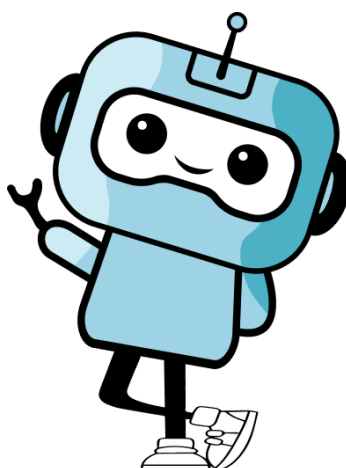

We welcome any ideas that customers may have to improve our Products or services.

Case Prioritisation

All case investigation is based on priority, Priority 1 being the highest and Priority 4 the lowest. Enquiries and service requests will never be raised above a P3. When logging an incident in one of our portals you will have the option of setting the priority. Once set, a revision of this rating may take place depending on changing impact or urgency. We aim to always keep you informed of this. We ask that our customers use the below guides in setting priorities.

		Urgency Level		
		Urgency 1 Impacts work that cannot be completed by the organisation's staff or its partners and is critically time sensitive	Urgency 2 Impacts work that cannot be completed by the organisation's staff or its partners, is not time sensitive, but is high in volume.	Urgency 3 Impacts work that cannot be completed by the organisation's staff or its partners, but is not time sensitive.
Impact Level	Impact 1 A service interruption which has a critical impact on the activities of the organisation; causes significant financial loss and/or disruption to the organisation or results in any material loss or corruption of data.	Priority 1	Priority 1	Priority 2
	Impact 2 A service interruption which can or could have a major (but not critical) adverse impact on the activities of the organisation and no work-around is available.	Priority 1	Priority 2	Priority 3
	Impact 3 A service interruption which has a major adverse impact on the activities of the organisation which can be reduced to a moderate adverse impact due to the availability of a work around.	Priority 2	Priority 3	Priority 3

Online Support for our users Within the System

As a valued user, you can access our extensive knowledge base for step-by-step guide on using the system. Our Knowledge Base features all modules explaining its functionality including demo video, and process flow charts.

The Knowledge base is accessible by clicking on the clipboard icon on the top bar within the system.

1st line Support for our users Within the System

If you are experiencing any issues other than logging in and access to the system; you can contact us by navigating to “Report an issue” located in the sidebar within the system. This should be the first and the quickest method of communicating issues to us. You will be requested to fill in a simple form to complete, details as follows: -

- **Title**, to enter a title description of the issue
- **Description**, to enter all the details and provide as much information as possible to assist us to deal with the issue
- **Category**, to select an appropriate option your issue falls under. There are four categories the user must submit their issue under, they are as follows: -
 - **Issue** – technical issues relating to the system including logging in issues, reporting a problem and if contents of the system are not functional or broken
 - **Feature Request** – a user has identified a new idea that is not available in the system. This will be subject to change management process
 - **Enhancement** – if user has identified an improvement or a suggestion to modify functions and features of the system. This will be subject to change management process
 - **Question** – A User may raise any question they have relating to the system or service via this form.
- Once the form has been completed, the user will need to click on **create** at the bottom of the form.

You will get an immediate acknowledgment within the system and the issue will be reported to the iMS team. The issue will be visible when the system generates a ticket and managed immediately by the iMS team. The team will communicate to you as the ticket progresses to feedback stage only after the issue has been through triage, research where a question is asked, development, where a bug is concerned, or administration where a change or feature request is concerned. The ticket will only be transitioned to satisfied once we have feedback that you are completely satisfied with the resolution.

In the unlikely event that you are unsatisfied, we will ask you for your feedback through communication, email, or survey to establish the reasons and route cause. We will endeavour to resolve the ticket considering your evaluation. The process of feeding back to you will be repeated until you are completely satisfied.

2nd line support for our users

How can I contact the Service Desk?

E-mail

You can reach us by e-mail on:

support@imssystems.tech

Please provide as much information as possible in the email

In the event of a **P1/Major Incident**, we urge customers to contact us by phone in the first instance.

Phone

You can reach us by phone on:

07722090530

Our opening hours are:

09.00 – 17.00

Mon – Fri

Closed during all
Bank Holidays.

Priority examples

Priority Level	Examples
Priority 1 – Urgent	A service interruption which has a critical impact on the activities of the organisation; could cause significant monetary loss and/or disruption to the organisation or results in any material loss or corruption of the organisation's data.
Priority 2 – High	A service interruption which can or could have a major (but not critical) adverse impact on the activities of the organisation and no workaround is available.
Priority 3 – Medium	A service interruption which has an adverse impact on the activities of the organisation, but the impact can be reduced due to the availability of a workaround.
Priority 4 – Low	A service or change request or a cosmetic issue not impacting the activities of the organisation

What can I do to support faster resolution?

When contacting the Service Desk about logging in issues, access problems or any other issue, you will need to provide as much information as possible including:

- Who you are
- The users, businesses, or customer name this is affecting
- The specific product(s) or portals affected.
- What impact this is having on your business in real terms e.g., service delivery
- Environmental issues that may have caused or might affect it
- A reference number (if calling about an existing matter)
- As much detail as possible about what you are reporting including:
 - Error messages (and the steps taken which cause the error message to appear)
 - Time/date when these errors occur
 - If the issue is intermittent or replicable (can you demonstrate it over and over?)
 - Screenshots
 - Which environments are affected e.g., Live/Test

How will you communicate with me?

We will always strive to resolve your query immediately, but sometimes a deeper level of investigation is required. The time required to do this will depend on the complexity of the issue and the factors involved. It may be necessary to ask you a few questions to establish additional information or even to request a copy of some data for further investigation. We will communicate with you via emails, phone calls and in some occasions on Microsoft Teams.

While your case is being investigated, you can expect regular contact, with higher frequency depending on its priority.

How will you resolve my issue?

Software defects

If we determine that a problem or fault reported by our clients relates to our application or portals, we will attempt to provide a solution. The solution may take the form of additional corrective software or an updated version of the software in which the problem has occurred. We will use reasonable endeavours to provide a full resolution when the next version of the relevant software is released. Incident resolution may take different forms e.g., advice, workaround or upgrade to later version – regardless of whether this version is released yet.

When will you respond to me?

We aim to resolve cases according to their Priority, usually with the most Urgent and Impactful cases being addressed first. The following is the Key Performance Indicator we use to target how quickly we aim to resolve an Incident or escalate it as a problem.

When will you respond?

Priority	Target response
1	1 hour
2	2 hours
3	1 day
4	2 days

When will my issue be resolved?

Priority	Target fix time (not including delivery of defect resolution and change requests)
1	4 hours
2	24 hours
3	5 days
4	10 days

What are the Managed Service Levels?

Availability

Monthly Availability Target	3 Month Rolling Availability Target
99%	99.5%

% availability of each managed service component is calculated as follows:

$$\frac{\text{Total Agreed Availability Hours} - \text{Unscheduled Outage Hours}}{\text{Total Agreed Availability Hours}} \times 100$$

Notes

Total Agreed On-line Availability Hours is defined as 7 days by 24 hours minus any agreed scheduled maintenance periods. Service outages caused by other service providers are excluded from this target e.g. loss of internet connection and other telecoms failures and links to 3rd parties.

Scheduled Maintenance

Maintenance period occurs on the 3rd Friday of every month. The scheduled maintenance will take place between 17:00hrs and 19:00hrs, unless otherwise stated. This is a window within which work will be carried out and therefore interruptions to services should be expected during these times.

IMS shall aim to provide all parties with at least ten working days' notice for scheduled service interruptions. Exceptions to this would be:

- Installation of Emergency Security Patches;
- Implementation of an emergency fix

Disaster Recovery

A disaster is considered to be where a situation causes or is anticipated to cause the loss of availability of the Service for a protracted period of time, considered to be at least 24 hours. In the event of a disaster, iMS first shall:

- Recover data stored off site;
- Recover the service at the nominated disaster recovery site;
- Aim to, where possible, provide a minimum service within 24 hours;
- Provide a fully functional system as soon as is logistically possible.
- Targets for the restoration of the Service do not apply in the event of a customer site disaster such as loss of equipment or premises.

How will you communicate with me?

If a service-affecting issue is identified during business hours, a service notifications email will be sent out to your list of company contacts, advising of the issue and any subsequent updates pertaining to the issue. It is important that you supply and keep us updated with a list of contacts – you can do this by contacting the Service Desk.

What should I do if I want to feedback or escalate?

If you have been dissatisfied with our service or products, or have cause to contact us to escalate any matters, we wish to assure you of the following commitments:

- We will acknowledge your feedback promptly.
- For issues that are more complex or require investigation, we will keep you informed of progress.
- We will endeavour to provide a final response as quickly as possible for most of the issues. Some software issues of particularly complex nature may require systems development. If this applies, we will advise you of this.
